

House Curtain

Proscenium stage is in various design, the different requirements are placed on the house curtain as to colour, style, fabric and operation. The house curtain plays an active part in any facility and enhancing the overall appearance of the venue.

Generally the fabrics we offer fall into three categories for flame retardancy. Fabrics are tested in accordance with BS5867 Part 2B.

Velvet, also known as velour, has traditionally been used as the preferred fabric for house curtains. Velvet is produced from either natural or synthetic yarns and is available in a wide range of colours and weights. In addition to providing a plush decorative cover for the proscenium opening, velvet has good acoustic and light block characteristics, thus velvet helps to block stage work lighting and deaden sounds of scenery changing.
